

Encouraging Family Planning Counseling that Promotes Meaningful Choice in Malawi

Background

- **Our goal:** Providers counsel women on all FP methods equally, in a way that women internalize, to facilitate informed choice.
- Unmet need in Malawi for FP is **19%** among married women (DHS 15-16).
- Designed for use in facilities and adapted to be used by CHWs due to COVID-19

Findings from our behavioral research informed solution design

Providers deliver biased and inconsistent information on each FP method

Providers rely on protocols that make counselling fast, without accounting for unique client needs

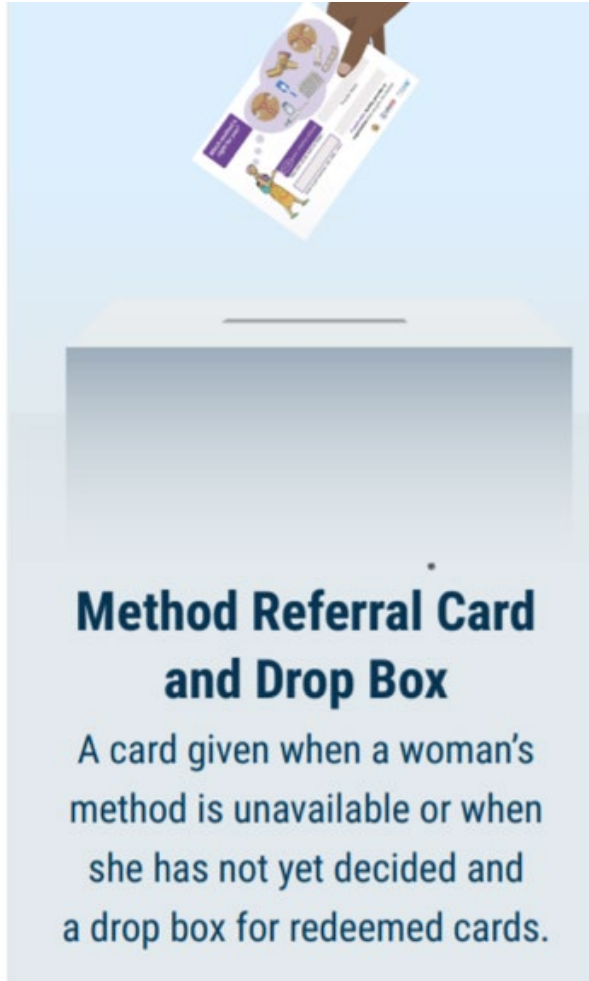

Providers focus on other aspects of their job that are more immediately pressing

Solutions developed

Group Counseling Tool

An interactive, gamified counseling tool, including dice and method discussion cards.

Method Referral Card and Drop Box

A card given when a woman's method is unavailable or when she has not yet decided and a drop box for redeemed cards.

Antenatal Care Handout

A visual discussion handout for FP counseling with pregnant women and a plan-making prompt to promote postpartum FP uptake.

Postpartum Family Planning Reference Guide

A behaviorally-informed reference sheet for providers to use when discussing family planning methods.

Group Counselling Tool: Ensures providers give equal and comparable information on all methods

Providers deliver biased and inconsistent information on each FP method.

Consider the methods that are right for you!

IUD

Small flexible device placed in the womb

Implant

Small rods placed under the skin of the upper arm

Permanent Methods

A permanent and safe surgery

Injectable

Hormonal injection, usually into the upper arm

Pills

Hormonal pills taken orally every day

Condoms

A barrier placed on the genitals and used every time you have sex

 When you can have your next child

 What you must remember

Consider the methods that are right for you!

When you can have your next child

What you must remember

Consider the methods that are right for you!

You can have your next baby whenever you're ready, in a short time or in a long time. When you want to have a baby, you can get pregnant right after you have the method removed by a provider.

You must only come to the clinic one time to get the method and then you're protected from pregnancy for up to 3 or 5 years, or whenever you decide to stop using the method. There is no charge have the method removed.
